

CLAIMS

1. An air purification and physiological metabolism promoting health material, the features of which are that the finely pulverized, naturally radioactive rare earth element is in an exposed state and attached to the surface of a synthetic
5 or natural base material.

2. An air purification and physiological metabolism promoting health material as claimed in Claim 1 in which the said finely pulverized, naturally radioactive rare earth element is disposed onto the said base material through an interlaced, adhesive, or other means.

10 3. An air purification and physiological metabolism promoting health material as claimed in Claim 1 in which the said base material of natural or synthetic construction is fabricated as a sheet or a board.

4. An air purification and physiological metabolism promoting health material as claimed in Claim 1 in which the said finely pulverized, naturally
15 radioactive rare earth element mineral is blended for use as single element or combination of two or more elements.
